**CHEN40004 Heat and Mass Transport Processes 2** 

Credit Points:	12.50
Level:	4 (Undergraduate)
Dates & Locations:	2010, Parkville  This subject commences in the following study period/s: Semester 1, Parkville - Taught on campus.
Time Commitment:	Contact Hours: Forty-eight hours Total Time Commitment: Estimated 120 hours
Prerequisites:	411-331 Heat and Mass Transport Processes 1
Corequisites:	None
Recommended Background Knowledge:	None
Non Allowed Subjects:	None
Core Participation Requirements:	For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Students Experiencing Academic Disadvantage Policy, academic requirements for this subject are articulated in the Subject Description, Subject Objectives, Generic Skills and Assessment Requirements of this entry. The University is dedicated to provide support to those with special requirements. Further details on the disability support scheme can be found at the Disability Liaison Unit website: http://www.services.unimelb.edu.au/disability/
Coordinator:	Assoc Prof Ray Dagastine
Contact:	Melbourne School of Engineering Office Building 173, Grattan Street The University of Melbourne VIC 3010 Australia General telephone enquiries: + 61 3 8344 6703 + 61 3 8344 6507 Facsimiles: + 61 3 9349 2182 + 61 3 8344 7707 Email: eng-info@unimelb.edu.au (/)
Subject Overview:	Content: Heat transport processes radiation: basic principles of radiation; shape factors (viewfactors); radiation between grey surfaces in the network approach; applications of networks for various situations. Conduction: Fourier's Law of heat conduction; multi-dimensional heat transfer equations; steady-state heat conduction and the Laplace equation; steady-state conduction with distributed heat source and the Poisson equation; simplified equation for steady-state heat conduction; fins; transient heat conduction and the diffusion equation; examples of simple solution of transient heat conduction; brief introduction to numerical methods for heat conduction problems. Mass transport processes: Multicomponent distillation, including short cut and rigorous techniques for the prediction of column performance. Solvent extraction, including the effect of axial dispersion. Adsorption and ion exchange - types of absorbents, fixed bed adsorber models, isothermal equilibrium and non-equilibrium design and operation. Mass transfer with chemical reaction, homogeneous and heterogeneous reactions, and application to equipment performance and design. Application of simultaneous heat and mass transfer to separation processes. Membrane separation processes and separation processes used in biotechnology.
Objectives:	Students successfully completing this subject will be able to:  # Apply the principles of heat transfer to conduction and radiation heat transfer problems

Page 1 of 2 02/02/2017 11:59 A.M.

	# Analyse and design separation operations including adsorption and ion exchange, multicomponent distillation, simultaneous mass and heat transfer, membrane separation processes and mass transfer with chemical reaction.
Assessment:	One written 3-hour end-of-semester examination (70%)A written 1-hour mid-semester test (15%)Up to five problem sheets distributed across the semester (15%). An overall mark of 50% and a mark of 40% or more in the end of semester examination are needed to pass the subject.
Prescribed Texts:	None
Recommended Texts:	Information Not Available
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	# Ability to apply knowledge of basic science and engineering fundamentals  # In-depth technical competence in at least one engineering discipline  # Ability to undertake problem identification, formulation and solution  # Ability to utilise a systems approach to design and operational performance
Related Course(s):	Bachelor of Engineering (Chemical Engineering) Bachelor of Engineering (Chemical and Biomolecular Engineering) Bachelor of Engineering (Chemical) and Bachelor of Arts Bachelor of Engineering (Chemical) and Bachelor of Commerce Bachelor of Engineering (Chemical) and Bachelor of Laws Bachelor of Engineering (Chemical) and Bachelor of Science Bachelor of Engineering (EngineeringManagement) Chemical
