Subject Overview:	This subject introduces and analyses critical concepts and terms central to debates over climate change, including risk and uncertainty, adaptation and mitigation, burden sharing, and problems and issues relating to regimes, strategies and policy instruments for addressing global warming. The subject considers the rise of climate change as a policy problem. It reviews and analyses the history of climate change policy as it has evolved nationally and internationally. It examines the bases of and interactions between national and regional climate policy, including in Australia, the United States and the European Union. It analyses debates and concerns that have led to the evolution of the Framework Convention on Climate Change (UNFCCC) and its Kyoto Protocol. Students will consider a range of policy instruments, including carbon taxes and emissions trading, and technologies that have been proposed or deployed to address this issue. This subject enables students to understand the evolution of a critical global environmental issue. It offers insights into technical, political, ethical and ecological issues that have framed climate change policy, particularly since 1992, and enables students to think critically about and participate in developing policy in this domain.
Objectives:	N/A
Assessment:	An essay of 1000 words 20% (due mid semester) and a 3000-word research essay 80% (due at the end of semester); or a 4000 word research essay 100% (due at the end of semester).
Prescribed Texts:	N/A
Recommended Texts:	Students are advised to read the 2001 reports of the Intergovernmental Panel on Climate Change (IPCC).
Breadth Options:	This subject is not available as a breadth subject.

Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
