Subject Overview:	This subject provides a detailed account of three aspects of specialty optometric practice: contact lenses, paediatrics and low vision. Students will gain experience predominantly by examining patients in these specialist areas.  Students will gain experience in the clinical aspects of examining children and understand how to tailor a consultation to evaluate children. Students will develop a strong understanding of the																				

	<p>diagnosis and management of children with accommodative-convergence disorders, strabismus and visual information processing problems. Students will also gain experience in school vision screening.</p> <p>The third component is low vision, in which students develop their clinical skills in the assessment of low vision patients, the provision of magnification aids and the multidisciplinary issues that effect low vision patients. The emphasis of this subject will be placed on students' ability to understand the practical aspects of providing care in an optometric setting for visually impaired patients. They will practice their technical skills and knowledge of low vision aid prescribing, relating clinical findings with symptoms and consideration of management options and acquire knowledge of broader care and support options available to the low vision and blind community.</p>
<b>Objectives:</b>	This subject aims to provide students with a thorough background in the clinical aspects of contact lens practice. Students will gain experience in all aspects of contact lens practice including: fitting of soft and rigid gas permeable lenses, care of contact lenses, and complications associated with contact lens wear. Students will also gain experience in the more advanced aspects of contact lens fitting and care including orthokeratology, presbyopia correction and fitting of lenses for specific eye conditions such as keratoconus and following corneal surgery.
<b>Assessment:</b>	Progressive assessment of clinical work throughout the year (30%); Two written clinical reports (2000 words each) due in week 13 of semester 2 (10%); an oral-station examination in first semester (10%); a 3-hour written examination in the second semester examination period (50%). Satisfactory completion of all assessment components is necessary to pass the subject. Timely attendance at all rostered clinical sessions, both national and international, is compulsory. Specific details relating to this requirement can be found in the Subject Guide.
