<b>Subject Overview:</b>	This subject covers key elements of building services and sustainability at a residential and commercial scale. The subject aims to teach the basic terminology and concepts behind providing comfortable and effectively functioning buildings in terms of sun, envelope, services (water, waste, gas, electricity, data, fire protection), heating and cooling, air quality, acoustics and vertical transport. Using the sustainability tools being used in the industry (FirstRate, Accurate, NABERS and Green Star) students will be given a framework in which to understand how buildings perform and their impact on the environment. They will also be introduced to modelling software that will enable them to carry out performance analysis of initial designs.
<b>Objectives:</b>	On completion of this subject students will be able to: # understand the terminology, principles and techniques of environmental control systems at both small and medium scale; # integrate environmental controls into architectural designs in a sustainable manner.
<b>Assessment:</b>	Submission and presentation of written and/or graphic material to the equivalent of 3000 words (60%); A 2-hour examination (40%). Regardless of assignment results, a minimum of 40% must be achieved in the examination in order to pass the subject.
