Course Overview:	This course involves subjects taught at the Dookie and Metropolitan campuses. Student's wishing to undertake their honours year at Dookie should note that although the honours research project can be taken at either the Dookie or Metropolitan campuses, the electives and selectives for this course are only available at the metropolitan campuses.		
	The honours year in Bachelor of Agriculture, comprises advanced coursework, and an individual research project designed to extend students' knowledge and skills in solving research problems. These honours programs can be undertaken on a full-time or part-time basis. The program can commence either in February or July. February commencement concludes in November. July commencement concludes in June of the following year. Most students study full time and commence in February.		
	On completion of the fourth (honours) year, the School determines the award of honours degrees on the basis of average mark of the weighted average of all fourth-year subjects. The resulting figure is the 'Honours Score'.		
Objectives:	Students who have completed this course should have acquired:		
	[#] basic practical skills required to manage a farm enterprise and supervise workers;		
	# a 'systems-thinking' approach to agricultural production and land management, including an understanding of the structures of agriculture-related industries; the principal factors tha determine their location, environmental impact, sustainability, profitability and international trade competitiveness; and the biophysical, economic and social factors that affect		
	production systems;		
	 production systems; # an understanding how agriculture and other land uses influence the landscape; 		
	 # an understanding how agriculture and other land uses influence the landscape; # appropriate knowledge and the ability to critically evaluate knowledge gained from a range 		
	 # an understanding how agriculture and other land uses influence the landscape; # appropriate knowledge and the ability to critically evaluate knowledge gained from a range of scientific, economic and social sources; 		
	 # an understanding how agriculture and other land uses influence the landscape; # appropriate knowledge and the ability to critically evaluate knowledge gained from a range of scientific, economic and social sources; # the ability to disseminate scientific and industry information; # skills to effectively analyse, and scientifically evaluate agricultural and environmental 		
	 # an understanding how agriculture and other land uses influence the landscape; # appropriate knowledge and the ability to critically evaluate knowledge gained from a range of scientific, economic and social sources; # the ability to disseminate scientific and industry information; # skills to effectively analyse, and scientifically evaluate agricultural and environmental problems and reach appropriate solutions; 		
	 # an understanding how agriculture and other land uses influence the landscape; # appropriate knowledge and the ability to critically evaluate knowledge gained from a range of scientific, economic and social sources; # the ability to disseminate scientific and industry information; # skills to effectively analyse, and scientifically evaluate agricultural and environmental problems and reach appropriate solutions; # effective communication skills in a variety of media; 		

	# an understanding of the research methodologies necessary to design and interpret small experiments;			
	# a commitment to the highest standards of academic acceptance of the community responsibilities of citiz standing.			
Course Structure & Available Subjects:	629-AA Bachelor of Agriculture (Honours) - Parkville			
	629-DO Bachelor of Agriculture (Honours) - Dookie			
Subject Options:	BACHELOR OF AGRICULTURE (HONOURS)			
	The honours course is comprised of coursework and a research project. The coursework subjects consist of core subjects, and electives to be selected essentially from 400-level subjects offered by the Melbourne School of Land and Environment and other faculties of the University. They will enable students to gain sufficient familiarity with the fields relevant to their research project. Up to two subjects not appearing on the recommended list can be taken for credit, subject to course coordinator approval. Students may select two 300-level subjects for credit, subject to course coordinator approval. Applicants to the program will need to demonstrate the completion of appropriate prerequisite subjects in their undergraduate courses when selecting coursework subjects. Students will also be expected to participate in research discussion groups or 'journal clubs' and to attend the Faculty's research seminar series.			
	Research Component			
	Students will select a project from a list formulated by su Research Project subject coordinator. Some of these pro- with industry, and collaborating institutions. Project propo	jects may be offered in coll	aboration	
	and a literature review will be presented before the Hono prior to commencing experimental work. Students will be their project proposal and the outcomes of their research (including references) will normally be limited to 20 000 v Students should enrol into 75 points of the following rese you commence mid year you may wish to take 50 points in Semester One of the following year. Entry Requirements:	 To be eligible for consideration for entry into honours in the Bachelor of Agriculture, applicants must have: # achieved an average of at least 65 in the third year (300-level) subjects in their Faculty undergraduate degree; or # completed an equivalent qualification to the Faculty undergraduate degree, this qualification being recognised by the Faculty, at a level of academic performance equivalent to that
	required in the point above.
Core Participation Requirements:	Please visit our website for details about core participation requirements: http://www.land- environment.unimelb.edu.au/studentpolicies/coreparticipation.html Students enrolling in the Melbourne School of Land and Environment are advised that some courses of study may put them at an increased risk of contracting Q Fever. Q Fever is a relatively common, preventable condition which while rarely fatal, can cause a severe acute illness and can result in damage to heart valves and chronic fatigue. It is recommended that students consider undertaking screening and vaccination for Q Fever prior to commencement of study. Students may be required to provide proof of vaccination prior to undertaking some coursework. Your course coordinator will advise you of this requirement prior to commencement of the study semester. Vaccine costs for students are not covered by the Pharmaceutical Benefits Scheme (PBS), Medicare, or by the University. Some students with full private health coverage (which has hospital and ancillary cover) may receive partial re-imbursement for vaccine costs.
Further Study:	After successfully completing the program, students will be prepared either to enter the workforce and pursue a career or to pursue further research study through a masters or doctor of philosophy degree.
Graduate Attributes:	Graduates will be expected to: have a strong sense of intellectual integrity and the ethics of scholarship have in-depth knowledge of their specialist discipline(s) reach a high level of achievement in writing, generic research activities, problem-solving and communication be critical and creative thinkers, with an aptitude for continued self-directed learning be adept at learning in a range of ways, including through information and communication technologies be well-informed citizens able to contribute to their communities wherever they choose to live and work accept social and civic responsibilities be advocates for improving the sustainability of the environment have a broad global understanding, with a high regard for human rights, equity and ethics
Generic Skills:	Students who complete this course should have acquired:
	$_{\#}$ a profound respect for truth, intellectual and professional integrity, and the ethics of
	 scholarship # a capacity for independent critical thought, rational inquiry and self-directed learning and research identification and description of the business environment in which rural and regional businesses operate # an ability to derive, interpret and analyse ecological, biological, social, technical or economic information from primary sources
	# an awareness of, and ability to utilize appropriate communication technology and methods for the storage, management and analysis of data
	 # an ability to utilize appropriate technology in the analysis of rural and regional business # a capacity for creativity and innovation, through the application of skills and knowledge
	# an ability to integrate information across a broad range of disciplines to solve problems in
	 applied situations # highly developed written communication skills to allow informed dialogue with individuals and groups from industry, government and the community # highly developed oral communication skills to allow informed dialogue and liaison with individuals and groups from industry, government and the community # an appreciation of social and cultural diversity from a regional to a global context
	 # an ability to participate effectively as part of a team # an ability to plan work, use time effectively and manage small projects
	# an ability to plan work, use time electively and manage small projects
