

BIOL30002 Experimental Reproductive Physiology

Credit Points:	12.50																																			
Level:	3 (Undergraduate)																																			
Dates & Locations:	This subject is not offered in 2013. Lecture and practice classes An enrolment quota of 40 students applies to this subject this year. For detailed information on the quota subject application process, refer to the Quota Subject link on the Science Student Centre website: http://studentcentre.unimelb.edu.au/eastern/																																			
Time Commitment:	Contact Hours: 1 x one hour lecture/tute per week; 1 x four hour practical class/research laboratory time per week; one 4 hour excursion during the semester. Total Time Commitment: Estimated total time commitment of 120 hours

Core Participation Requirements:	For the purposes of considering applications for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005) and Students Experiencing Academic Disadvantage Policy, this subject requires all students to actively and safely participate in laboratory activities. Students who feel their disability may impact upon their participation are encouraged to discuss this with the Subject Coordinator and the Disability Liaison Unit. http://www.services.unimelb.edu.au/disability/
Contact:	Dr Mark Green mailto:mark.green@unimelb.edu.au (mailto:mark.green@unimelb.edu.au)
Subject Overview:	Using laboratory experience, students will gain a first-hand understanding of the structure, function, and development of the reproductive organs. They will examine selected aspects of the endocrine and neuroendocrine and environmental control of reproduction, fertilisation, pregnancy, parturition and lactation in mammals. They will gain experience in experimental design, cutting-edge research techniques, data analysis, and scientific report writing. They will be introduced to the practicalities of reproductive manipulation and assisted reproductive technologies.
Objectives:	<p>This subject aims to give students of science and biomedical science a solid foundation in laboratory practise in reproductive biology. Students will be provided with an opportunity to engage in an authentic experience of scientific research: addressing questions in reproductive physiology to generate a hypothesis; designing an experiment; hands-on experience in the use of experimental animals; working in a group to complete the experiments and collect and analyse the data; writing up an individual final report in the format of a scientific manuscript; and peer-review.</p> <p>By the completion of this subject students should:</p> <ul style="list-style-type: none"> # understand the modern experimental approaches of reproductive physiology and assisted reproductive techniques; # be aware of the ethical issues in using animals for experimental studies; # understand and be able to apply selected methods used in reproductive physiology research; # understand the structure and function of male and female reproductive systems; # understand neuroendocrine and endocrine control systems and their role in the regulation of reproductive processes; and # understand the process by which scientists move from an original idea to a final published paper.
Assessment:	3 x Laboratory worksheets of 200 words each assessed during semester (30%); peer-reviewed project proposal of 500 words due in week 6 (10%); project report of 3000 words due in week 10 (50%); peer-reviewed group oral presentation of 20 minutes due in week 12 (10%)
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	This subject builds upon existing generic skills, including an ability to approach and assimilate new knowledge from observation and the literature, and an ability to use that knowledge to evaluate and communicate results. Students should acquire the basic skills required to make and record scientific observations, and evaluate data in an objective manner as part of practical class report writing. They will be encouraged to access information from the primary scientific literature, through both electronic and traditional sources, and to develop the skills needed to produce scientific reports that are succinct, clear and completed on time. They should develop their abilities to evaluate scientific evidence critically, to formulate hypotheses, and be alert to alternative explanations. Students should also gain first-hand experience in the ethical use of animals in experimentation. Students will undertake practical work in a small group and will increase their skills in cooperative teamwork.
