CVEN90050 Geotechnical Engineering

Credit Points:	12.50		
Level:	9 (Graduate/Postgraduate)		
Dates & Locations:	This subject is not offered in 2014.		
Time Commitment:	Contact Hours: 48 hours, comprising up to three hours of lectures per week, one 1-hour tutorial per week and 2 hours of laboratory work per semester Total Time Commitment: 200 hours		
Prerequisites:	Students must have completed BOTH of the following subjects, or equivalent to enrol in this subject:		
	Subject	Study Period Commencement:	Credit Points:
	ENEN20002 Earth Processes for Engineering	Semester 2	12.50
	CVEN30010 Systems Modelling and Design	Semester 2	12.50
Corequisites:	None		
Recommended Background Knowledge:	Learning in this subject will be assisted by knowledge gained in the following subject:		
	Subject	Study Period Commencement:	Credit Points:
	CVEN90044 Engineering Site Characterisation	Semester 1	12.50
Non Allowed Subjects:	Students cannot gain credit for this subject and:  # 421-306 Geotechnical Engineering		
Core Participation Requirements:	For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Student Support and Engagement Policy, academic requirements for this subject are articulated in the Subject Overview, Learning Outcomes, Assessment and Generic Skills sections of this entry. It is University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and Student Equity and Disability Support: <a href="http://services.unimelb.edu.au/disability">http://services.unimelb.edu.au/disability"&gt;http://services.unimelb.edu.au/disability</a>		
Contact:	Dr Guillermo A. Narsilio  narsilio@unimelb.edu.au (mailto:narsilio@unimelb.edu.au)		
Subject Overview:	AIMS  Soil and rock are among the most important civil engineering foundations of all structures, can be rearranged to provide a like embankments for road and railways, can form a structural levee banks or dam walls, or may need to be removed to all and cuttings. Students completing this unit should understar complex soil conditions, how to establish strength/deformation how to apply fundamental geomechanics knowledge learner involving the stability of an earth mass for these various siturally be able to work under the guidance of a chartered enging construction of a range of geotechnical structures such as for walls.  This subject builds directly on knowledge from a range of unsubjects in the areas of mathematics, statistics, earth process.	topography to suit particle in its own right when upow access such as with and how to make simplific on characteristics of the din earlier units to solve ations. Graduates from the eer to design and superbundations, roads, and reduced the control of the control	cular needs used for tunnels ations to soil and problems this subject vise etaining aduate

	mechanics. It also draws on knowledge of sustainability and management to provide context for problems.  INDICATIVE CONTENT  Topics covered include a detailed review of pore-water pressures and effective stress, soil strength and compressibility (tri-axial testing, SPT, and others), consolidation, compaction and their applications to geotechnical design in selected areas, rigid and flexible earth retaining structures, reinforced soil walls, pavements, and introduction to geothermal energy.	
Learning Outcomes:	INTENDED LEARNING OUTCOMES (ILO) Having completed this subject the student is expected to:  1 Make simplifications to complex soil conditions 2 Establish strength/deformation characteristics of soil 3 Apply fundamental geomechanics knowledge learned in earlier units to solve problems involving the stability of an earth mass	
Assessment:	Three 1000 word assignments due throughout the semester (30%). Two assignments use data from laboratory tests. Associated with Intended Learning Outcomes (ILOs) 1, 2 and 3. One 3-hour examination, end of semester (70%), associated with ILOs 1, 2 and 3. Hurdle requirement: Students must pass BOTH assignment and exam components to pass the subject.	
Prescribed Texts:	Course notes will be made available in LMS or for purchase from the University Bookroom.	
Recommended Texts:	None	
Breadth Options:	This subject is not available as a breadth subject.	
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees	
Generic Skills:	# Ability to apply knowledge of basic science and engineering fundamentals  # Ability to communicate effectively, not only with engineers but also with the community at large  # Ability to undertake problem identification, formulation and solution  # Ability to utilise systems approach to design and operational performance  # Ability to function effectively as an individual in multi-disciplinary and multicultural teams, with the capacity to be a leader or manager as well as an effective team member  # Expectation of the need to undertake lifelong learning and the capacity to do so  # Capacity for independent critical thought, rational inquiry and self-directed learning  # Intellectual curiosity and creativity, including understanding of the philosophical and methodological bases of research activity	
Notes:	LEARNING AND TEACHING METHODS  The subject is based principally on lectures and tutorials; and the critical reading of prescribed textbooks, lecture notes, and selected papers. Depending on availability of site constructions with works related to the subject objectives, a site visit co-organised by lecturers and experienced industry professionals is also implemented to reinforce some concepts learnt in the classrooms. A laboratory session is used to complement the fundamentals of strength (tri-axial) and compressibility (consolidation) testing and analysis.  INDICATIVE KEY LEARNING RESOURCES  Course notes will be made available in LMS or for purchase from the University Bookroom, as well as selected journal articles, references to relevant AS/NZ and/or ASTM standards.  CAREERS / INDUSTRY LINKS  Experienced industry professionals and specialist contractors present during site visits and provide background material about the construction sites and projects (acting as case studies). These site visits are undertaken to enhance students understanding of typical geotechnical works, particularly in excavations and earth retaining structures.	
Related Course(s):	Bachelor of Engineering (Civil) and Bachelor of Science Master of Philosophy - Engineering Ph.D Engineering
