Subject Overview:	<p>This subject investigates how social determinants and social worlds affect the health and wellbeing of young people and examines social life from historical, global and cultural perspectives. Students will draw on a diversity of theoretical perspectives to analyse how society operates and how social changes influence the health, wellbeing and behaviours of young people. Throughout this subject, particular emphasis is placed on examining and explaining social and health inequalities. Issues of gender and popular culture and concepts related to social networks, social capital, social cohesion and social control are explored. The relationship between micro and macro views of society (micro-macro linkage), and the relationship between social structures, institutions and human agency are investigated with reference to contemporary adolescent health issues. Approaches to interventions focusing on changing social contexts will be critically examined.</p>
Learning Outcomes:	<p>This subject is designed to enable students to</p> <ul style="list-style-type: none"> # distinguish sociological ideas about young people from psychological and biological explanations; # reflect upon and explain how events that concern individual young people are connected with larger social issues; # recognise how social changes and social factors impact on the health, wellbeing and behaviours of young people; # describe those factors that contribute to social and health inequalities for young people; # evaluate and apply sociological perspectives to contemporary adolescent health issues; # explain approaches to interventions that aim to change social contexts and enhance youth participation.:

Assessment:	Minor essay: critical writing on constructions of young people (1500 words, due end of week 6, 40%) Major essay: improving social context (3000 words), due end of week 12, 60%)
Prescribed Texts:	N/A
