Subject Overview:	This subject explores a range of contemporary environmental issues in Australia, and internationally, and the ways in which people in these places engage with and manage these issues. Examining the history of the emergence and management of particular environmental issues, case studies are used to illuminate ways of understanding the politics of these issues and managing them in the present. The subject examines linkages between the scientific, cultural, economic and political dimensions of environmental politics and management and examines the forms of knowledge and types of power that construct and mediate people's relationships with their environment. Students should become familiar with mechanisms used to contain or resolve recent environmental conflicts, and be able to interpret them in the context of broader questions relating to environmental governance and sustainable development.
Learning Outcomes:	N/A
Assessment:	An oral presentation of a tutorial paper 10% (due during the semester. Presentation to be given in 2 person teams. Approximately 10 minutes per person.). Stakeholder analysis, essay structure, and argument exercise (500 words) due week 3, 5% An essay of 1,500 words 40% (due mid-semester break). A take-home examination of 1,000 words 40% (due at the end of
