MCEN30014 Mechanical Design

Credit Points:	12.5		
Level:	3 (Undergraduate)		
Dates & Locations:	2015, Parkville This subject commences in the following study period/s: Semester 2, Parkville - Taught on campus.		
Time Commitment:	Contact Hours: 36 hours of lectures and up to 24 hours of practical work Total Time Commitment: 170 hours		
Prerequisites:	Postgraduate students: Admission into the Master of Engineering (Mechanical) OR (Mechanical with Business). Undergraduate students:		
	Subject	Study Period Commencement:	Credit Points:
	MCEN30017 Mechanics & Materials	Semester 1	12.50
	AND either:		
	Subject	Study Period Commencement:	Credit Points:
	MAST20029 Engineering Mathematics	Summer Term, Semester 1, Semester 2	12.50
	OR both of the following subjects		·
	Subject	Study Period Commencement:	Credit Points:
	MAST20009 Vector Calculus	Semester 1, Semester 2	12.50
	MAST20030 Differential Equations	Semester 2	12.50
	MAST20030 Differential Equations can be taken concurrent	ly.	
Corequisites:	None		
Recommended Background Knowledge:	Postgraduate students will be disadvantaged by not having met the prerequisite subjects (or equivalents) as listed for undergraduate students.		
Non Allowed Subjects:	None		
Core Participation Requirements:	For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Students Experiencing Academic Disadvantage Policy, academic requirements for this subject are articulated in the Subject Description, Subject Objectives, Generic Skills and Assessment Requirements of this entry. The University is dedicated to provide support to those with special requirements. Further details on the disability support scheme can be found at the Disability Liaison Unit website: http://www.services.unimelb.edu.au/disability		
Coordinator:	Dr Colin Burvill		
Contact:	<u>colb@unimelb.edu.au</u> (mailto: colb@unimelb.edu.au)		
Subject Overview:	AIMS		

	Topics covered include: general approach to design problems; invention, analysis, decision making; terminologies such as 'goal', 'objectives', 'criteria' and 'constraints'; strategies for synthesis and decision making; technical, ergonomic and economic factors; appraisal of benefit and cost; fault and failure analysis; probability, uncertainty, and assessment of risk; and interfacing geometric and mathematical models, sensitivity analyses, combinatorial search, structured approaches to material selection; failure modes for engineering systems, failure predictors for engineering components under multi-axial stress conditions; rational assessment of safety factors and maximum credible accident; integrity of structures and machines, design against failure; modelling of complex load-bearing systems in terms of simple engineering components; design of elements of structures and machines from first principles; and approaches to uncertainty in design problems, including those related to the environment.
	INDICATIVE CONTENT
	Introduction to strategies for creative idea generation in engineering design -
	# The design process – specifying problems and generating solutions
	 # Making decisions – decision-making strategies, cost benefit analysis, economic and human factors # Fault / failure analysis.
	Introduction to engineering graphical communication -
	# Sketching
	# Orthographic (multiview), layout, assembly and detailed drawings
	# Dimensioning.
	Introduction to structural integrity in engineering design -
	# Structural integrity and the nature of failure
	# Structural distillation – decomposition of structural systems into elementary engineering
	" components
	# Estimation, units and calculation
	# Failure predictors and factors of safety
	# Patigue – What is latigue? Time-varying stresses, latigue strength, design against latigue. S-N diagram, A-M diagram. Shafts as an example of fatigue-based structural integrity design.
Learning Outcomes:	INTENDED LEARNING OUTCOMES (ILOs)
	Having completed this unit the student is expected to have the skills to:
	Having completed this unit the student is expected to have the skills to:1 Describe engineering design methodologies that can assist the creation of mechanical
	 Having completed this unit the student is expected to have the skills to: 1 Describe engineering design methodologies that can assist the creation of mechanical artefacts and systems 2 Synthesize solutions to reasonably ill-defined design problems
	 Having completed this unit the student is expected to have the skills to: 1 Describe engineering design methodologies that can assist the creation of mechanical artefacts and systems 2 Synthesize solutions to reasonably ill-defined design problems 3 Manage relatively complex mechanical engineering design projects
	 Having completed this unit the student is expected to have the skills to: 1 Describe engineering design methodologies that can assist the creation of mechanical artefacts and systems 2 Synthesize solutions to reasonably ill-defined design problems 3 Manage relatively complex mechanical engineering design projects 4 Determine the integrity of structures and machines, to design against failure.
Assessment:	 Having completed this unit the student is expected to have the skills to: 1 Describe engineering design methodologies that can assist the creation of mechanical artefacts and systems 2 Synthesize solutions to reasonably ill-defined design problems 3 Manage relatively complex mechanical engineering design projects 4 Determine the integrity of structures and machines, to design against failure.
Assessment:	 Having completed this unit the student is expected to have the skills to: 1 Describe engineering design methodologies that can assist the creation of mechanical artefacts and systems 2 Synthesize solutions to reasonably ill-defined design problems 3 Manage relatively complex mechanical engineering design projects 4 Determine the integrity of structures and machines, to design against failure. One two-hour end-of-semester examination (40%)• Three assignments (projects) total of 60% Assignment 1 (48%) assessed tasks in weeks, 2, 4, 6 8 - approximately 40 hours work per studentAssignment 2 (6%) week 9 - 8 to 10 hours work per studentAssignment 3 (6%) week

	You should visit learn more about breadth subjects (http://breadth.unimelb.edu.au/ breadth/info/index.html) and read the breadth requirements for your degree, and should discuss your choice with your student adviser, before deciding on your subjects.	
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees	
Generic Skills:	 On completion of this subject, students should have developed the following generic skills - The ability to apply knowledge of science and engineering fundamentals The ability to undertake problem identification, formulation, and solution The capacity for creativity and innovation The ability to utilise a systems approach to complex problems and to design and operational performance Proficiency in engineering design The ability to conduct an engineering project. 	
Notes:	LEARNING AND TEACHING METHODS	
	The subject will be delivered through a combination of lectures, tutorials and workshops that will feature student-centred activities including a substantial design-build-test-evaluate assignment.	
	INDICATIVE KEY LEARNING RESOURCES	
	Budynas, R.G. and Nisbett, J.K (2011), <i>Shigley's Mechanical Engineering Design, 9th SI Edition,</i> McGraw-Hill.
