ENEN90027 Energy for Sustainable Development

9 (Graduate/Postgraduate)
2016, Parkville This subject commences in the following study period/s: Semester 1, Parkville - Taught on campus.
Contact Hours: 36 hours (Lectures: 2 hours per week; Set task and discussions: 1 hour per week) Total Time Commitment: 200 hours

For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Student Support and Engagement Policy, academic requirements for this subject are articulated in the Subject Overview, Learning Outcomes, Assessment and Generic Skills sections of this entry. tis University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and Student Equity and Disability Support: http://services.unimelb.edu.au/disability
Dr Behzad Rismanchi

AIMS This subject provides understanding of the principles of development and sustainability in the context of renewable and non-renewable energy sources. Social, environmental and financial implications of technologies to de-carbonise emissions and technologies that can offer a future non-carbon energy supply are discussed. This subject uses project based learning where students work in teams to investigate the appropriateness of a selected energy source or a selected technology for a particular country, region or a location. Students learn to apply the principles of sustainability and development. Knowledge gained in this subject will allow graduates to practice in the area of energy policy and planning. The subject complements other subjects offered in the energy theme of the Department such as Solar Energy, Energy Efficiency Technology and Sustainable Infrastructure Engineering. INDICATIVE CONTENT # Introduction: What does 'sustainable' mean? What is development? A model for sustainable development # Consumption (needs versus wants), Global perspectives (inequality and resource distribution) # Role of energy in development # Requirements for an sustainable energy supply # Carbon versus non-carbon energy supply - overview (resources, usage) # Problems with past patterns of energy use

Page 1 of 3 02/02/2017 9:18 A.Μ.

	# Carbon capture and storage
	# Nuclear fission and fusion
	# Renewable energy technologies - large and small
	# Discussion Forum: Reality of Sustainability.
	# 2.0000000000 Crammit Country of Outstandards.
Learning Outcomes:	INTENDED LEARNING OUTCOMES (ILO) On completion of this subject the student is expected to:
	 Critique energy systems and sources for their sustainability Describe the various technologies that have the potential to provide a sustainable energy supply system Analyse the conflicting outcomes arising from the need for increased energy use in most developing countries and the global and local needs for sustainability and minimal
	environmental impact 4 Describe and analyse the factors which lead to making an informed choice between energy resources and technologies.
Assessment:	One 3-hour written examination (50%) at end of semester. Intended Learning Outcomes (ILOs) 1, 3 and 4 are addressed in the examination One 2000 word (per student) group report (35%) due at the end of semester, requiring approximately 60 hours of work per student. ILOs 1, 2, 3 and 4 are addressed in the report One intermediate report (15%) 1000 word per student, during the semester at a time to be advised, requires approximately 25 hours of work per student. ILOs 1, 2, 3 and 4 are addressed in the report.
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	Students successfully completing this subject should develop the following general skills: # Ability to undertake problem identification, formulation and solution # Understanding of social, cultural, global, and environmental responsibilities and the need to employ principles of sustainable development # Ability to utilise a systems approach to design and operational performance # Capacity for independent critical thought, rational inquiry and self-directed learning # Ability to communicate effectively, with the engineering team and with the community at large.
Notes:	LEARNING AND TEACHING METHODS The subject is based on presentations by three lecturers who are experts in the field. In addition each student prepares and presents a research report on an energy and sustainable development topic related to a chosen country, part of a country or a city of their interest. INDICATIVE KEY LEARNING RESOURCES Reference book: • Diesendorf, M (2007) Greenhouse Solutions with Sustainable Energy, University of New South Wales Press Journals: • Journal of Energy and Development • Energy Policy • Journal of Sustainable Development CAREERS / INDUSTRY LINKS Sustainable Energy Association of Australia (SEA)
