Subject Overview:	Using clinical cases to illustrate principles, this subject examines the structure, function and potential for dysfunction of the respiratory system of the major domestic animal species. As students develop an understanding of the mechanisms of disease of this system, they will develop skills in the clinical evaluation of it and in the interpretation of relevant diagnostic procedures.												
Learning Outcomes:	This subject aims to equip students with a sound understanding of the mammalian respiratory system in health and disease, and to provide them with the skills necessary to undertake clinical investigation of this system.												

Assessment:	A one-hour test held during semester worth 20% Computer based assessment of case study exercises worth 10% A two-hour exam to be held in the end-of-semester exam period worth 70%
