Course Overview:	<p>Following the introduction of the chemical engineering degree in 1952, graduates from the Department of Chemical and Biomolecular Engineering have been rapidly accepted into industry, both in Australia and worldwide. Graduate Chemical and Biomolecular Engineering starting salaries are higher than any other engineering discipline.</p> <p>Chemical and Biomolecular Engineering is concerned with developing and analysing process systems, which are strongly dependant upon chemistry and involve physical changes. Out graduates find employment in the biochemical industry, the food industry, as well as in the traditional chemical industry. Chemical and Biomolecular Engineers are well suited for environment-related engineering positions given their strong background in process systems and in chemical biological processes in particular.</p> <p>The single degree, Bachelor of Engineering (Chemical), requires the completion of 400 points over four years.</p>

Course Structure & Available Subjects:	<p>The recommended or standard course structures are listed below. When setting the timetable every effort will be made to avoid clashes between the times of classes associated with these sets of subjects, Students should be aware however, that if it proves to be impossible to achieve a timetable without clashes in these sets of subjects, the Faculty reserves the right to modify course structures in order to eliminate the conflicts. Students will be advised during the enrolment period of the semester if the recommended courses need to be varied. Where the courses include elective subjects these should be chosen so that timetable clashes are avoided. In particular, students in combined degrees should plan their courses so that the subjects chosen in the other faculty do not clash with those recommended for the engineering component.</p>
