<b>Subject Overview:</b>	<p>A general review of systems theory and practice is presented, with the particular focus of assisting participants to understand the social system and to develop interventions in that context. The sessions cover: communication in groups (selective perception and culture, perception and communication, understanding communication in groups); membership in formal and informal organisations (multiple memberships, group norms, group pressure and deviancy, the power of groups, conformity, compliance and obedience and the goals of a group); surface and hidden agendas; leadership; a systemic view of small group behaviour; group problem solving and decision making; the use of humour in groups; the family as a microcosm of a group; supportive structures and processes within groups. Since learning, development and adaptation of the individual occurs within varieties of social contexts, namely the school, the family and the peer group, the role of the support systems within the school, the family and the community are considered. School and family as systems are examined. Since systems work in education is heavily informed by family systems work and training in family therapy readily generalises to work with other groups, the family as a system is addressed.</p>
<b>Assessment:</b>	<p>Two parts to the Assessment: an analysis of a selected problem and an interpretation of its genesis, maintenance and possible solution in systemic terms (3,000 words; 60 per cent); and a detailed analysis of a selected topic that relates to the prescribed or recommended reading (2,000 words; 40 per cent).</p>
