

654-306 Marine Zoology

Credit Points:	12.500
Level:	Undergraduate
Dates & Locations:	2008, This subject commences in the following study period/s: Summer Term, - Taught on campus.
Time Commitment:	Contact Hours: 12 lectures and 40 hours of practical work; six hours of excursions (the subject is held in the summer break before Semester 1) Total Time Commitment: 120 hours
Prerequisites:	654-201 and 654-202.
Corequisites:	None
Recommended Background Knowledge:	None
Non Allowed Subjects:	None
Core Participation Requirements:	It is University policy to take all reasonable steps to minimise the impact of disability upon academic study and reasonable steps will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact upon their active and safe participation in a subject are encouraged to discuss this with the relevant subject coordinator and the Disability Liaison Unit.
Coordinator:	Professor D L Macmillan; Dr S Swearer
Subject Overview:	<p>Upon completion of this subject students should have:</p> <ul style="list-style-type: none"> # an appreciation of the range and diversity of the main groups of marine animals particularly those of south-eastern Australia; # an understanding of the morphological, physiological, behavioural and developmental characteristics of selected groups; and # an understanding of some current research issues involving marine animals. <p>In the practical component students should develop the ability to recognise and classify the main groups of marine animals and develop an understanding of their morphological, physiological, behavioural and developmental characteristics. The subject provides for advanced study of animal groups that are important in the marine environment. Structural, physiological, behavioural and developmental aspects of their biology are covered with particular emphasis on areas in which there is current research activity.</p> <p>This subject builds upon existing generic skills, including an ability to approach and assimilate new knowledge from observation and the literature. Students should learn how to access information from the primary scientific literature, through both electronic and traditional sources, and gain experience in writing scientific reports. Students should learn the importance of careful observation and the context in which that observation is undertaken when posing and answering theoretical questions and when solving practical problems. It should assist students in developing the ability to recognise which questions relating to a topic are important and which are amenable to solution with the available tools. It should develop students' abilities to work in field situations and to integrate their observations with existing literature and knowledge.</p>
Assessment:	The relative weighting of assessed written work and assessed practical work will be chosen so as to maximise the student's final mark: Essays and/or reports of up to 3000 words (either 60% or 80%) and practical record (either 40% or 20%), both due during first semester immediately following the summer semester in which the subject was undertaken. The record of practical work is a description of observations and experimental results obtained during fieldwork undertaken during the summer semester; the essays and reports are submitted and assessed during first semester.
Prescribed Texts:	None

Breadth Options:	<p>This subject is a level 2 or level 3 subject and is not available to new generation degree students as a breadth option in 2008.</p> <p>This subject or an equivalent will be available as breadth in the future.</p> <p>Breadth subjects are currently being developed and these existing subject details can be used as guide to the type of options that might be available.</p> <p>2009 subjects to be offered as breadth will be finalised before re-enrolment for 2009 starts in early October.</p>
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Notes:	<p>Students enrolled in the BSc (pre-2008 BSc), BAsc or a combined BSc course will receive science credit for the completion of this subject.</p> <p>This subject is likely to be quota-restricted this year.</p> <p>Previously carried subject code 654-313 Marine Zoology.</p> <p>Experiments involving the use of animals are an essential part of this subject; exemption is not possible.</p>
