| <b>Subject Overview:</b>                 | Behavioural economics extends traditional economics by incorporating insights into human behaviour derived from psychology and sociology. The behavioural patterns studied in this subject include judgement biases, mental accounting, framing, loss aversion and anchoring, present-biased preferences, fairness, negative reciprocity and visceral influences. Applications of behavioural economics to both microeconomic and macroeconomic topics will be considered, such as self-control, wage rigidity and involuntary unemployment, social capital and the equity premium puzzle. Research techniques emphasised in behavioural economics, such as experimental methods, will be discussed.  |
