Subject Overview:	<p>This subject critically examines the ways in which business organisations affect and are affected by the wider society in which they operate. That 'wider society' includes governments, communities, the natural environment and other stakeholders. It also includes global and local trends and forces, e.g., advances in technology, cultural diversity, economic and political forces. This subject explores the contested meanings and practices of ethical decision making in organisations and corporate social responsibility. It also examines how public issues and crises rise and fall over time, and how organisations respond (e.g., triple bottom line reporting). Such issues and crises include corporate financial scandals, anti-globalisation protests and climate change. This subject also considers the impact upon profitability, or the 'business case', for operating in an ethical and socially responsible manner. These themes constitute major strategic questions currently facing organisational managers and researchers.</p>
