

476-664 Item Response Modelling

Credit Points:	25.00
Level:	9 (Graduate/Postgraduate)
Dates & Locations:	2009, This subject commences in the following study period/s: Semester 2, - Taught on campus.
Time Commitment:	Contact Hours: 36 hours Total Time Commitment: Not available
Prerequisites:	None
Corequisites:	None
Recommended Background Knowledge:	None
Non Allowed Subjects:	None
Core Participation Requirements:	<p><p>For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Student Support and Engagement Policy, academic requirements for this subject are articulated in the Subject Overview, Learning Outcomes, Assessment and Generic Skills sections of this entry.</p> <p>It is University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and Student Equity and Disability Support: http://services.unimelb.edu.au/disability</p></p>
Coordinator:	Prof Raymond Adams
Subject Overview:	This unit provides an understanding of item response modelling. The subject examines item response theory from an advanced perspective, including the development of single and multiple parameter models, their specification, estimation and evaluation. Procedures for calibration and banking tasks based on rating and criterion referenced scales, constructed response and judgement-based assessments as well as choice tasks are explored. Additional topics include differential item functioning, test equating, and multi-faceted and multi-dimensional models. Applications of the models are explored with ConQuest.
Objectives:	To develop a familiarity with the estimation and application of advanced item response theory models.
Assessment:	Three papers totaling 8,000 words. Presentation of the papers (15 - 20 minutes) to class. 33 per cent to each paper and presentation.
Prescribed Texts:	None
Recommended Texts:	Hambleton, R.K, Swaminathan, H., & Rogers, H.J. (1991) Fundamentals of Item Response Theory. Newbury Park, California: Sage Publications.
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	<p>On completion of this subject, students should be able to:</p> <ul style="list-style-type: none"> # understand the derivation of dichotomous and polytomous Rasch Models; # apply the technique of simulation to explore item response modeling; # analyse item response data with facets models; # analyse multi-dimensional item response data; # analyse item response data with collateral variables;

	<p># estimate population characteristics from item response data;</p> <p># understand issues relating to equating, item banking and test design.</p>
Links to further information:	www.edfac.unimelb.edu.au
Notes:	Advanced skills in assessment design and analysis, test equating and interpretation, and a high level of statistical and mathematical skills.
