<b>Subject Overview:</b>	<p>This subject deals with the masterpieces of Greek art, which have inspired generations of artists and scholars. It shows how the Greeks gradually attained a full understanding of how to portray the human body in sculpture and painting. This development is traced through a study of sculptures excavated at Athens, Delphi, Olympia and other Classical sites. Famous works such as the Elgin marbles, the Doryphoros of Polycleitos and the Hermes of Praxiteles are evaluated in their wider context. Although very little Greek wall painting survives, its development can be inferred from a study of the great abundance of Greek painted pottery to be found in collections all over the world including the National Gallery of Victoria. Architecture is an important component of this subject, particularly the development of the Doric, Ionic and Corinthian orders and how they were used. Special attention is paid to the history of temple architecture from its mud-brick and timber origins to its culmination in the masterpiece of the Parthenon. The city of Athens in the 5th century BC is given particular attention; the Greek buildings and towns of south Italy, Sicily and North Africa are prominently featured; and the principles of Greek town planning are explained.</p>
