Subject Overview:	In modern market economies, producers, processors and marketers of primary products increasingly have to manage their businesses in the face of exposure to variability of, and uncertainty about, commodity prices. Consequently an imperative of business life is improving business management by using methods for managing the various forms of risk associated with primary commodities. Nowadays a sound understanding of the theory and practice of futures market operations, and associated price risk management instruments, is fundamental to sound business management and decision-making.
Objectives:	This subject concerns the theory and practice of risk management using risk management instruments of futures, options and other derivative instruments. The emphasis is on applying these instruments to applied business situations and on developing, implementing and refining trading strategies designed to meet the precise needs of a specialised user. In this subject, students will learn: <ul style="list-style-type: none"> # Futures market operations in practice # The use of derivative - prise risk management instruemnts, options, trading, forward contracting # Risk shifting and strategic marketing alliances.
Assessment:	Individual Assignments, 3000 words (40%), Group Assignments, 2000 words (20%), Case Studies, 2000 words (20%), On-line Discussion Participation (20%).
