Subject Overview:	This subject introduces students to ways that anthropologists analyse and interpret variation in economic behaviour and economic systems. We will examine the assumptions about human behaviour that inform classical, political and moral approaches to interpreting economics, and then ask what frames the options that are available for people to choose from and how people may come to value those options differently. Ethnographic examples from systems of different complexity are used to explore the diverse ways in which production, consumption and exchange may be organised and understood, and the ways these domains are articulated. Students should become familiar not only with how local economies work, but also with implications of the emerging global economy and the ways it is transforming local and regional logics.									
Objectives:	Students who successfully complete this subject will: <ul style="list-style-type: none"> # have a thorough understanding of the different approaches within anthropology to analysing economic behaviour and systems. # have acquired a knowledge of the ethnographic literature on the dynamics of production, consumption and exchange in systems characterised as "domestic", "tributary" and "capitalist" 									

	<p># have critically examined key debates in economic anthropology about such issues as: division of labour; "gift" and "commodity" economies; formal and informal economies. consumption, identity and "consumer society"; the meaning of "money" and its effects.</p> <p># have an understanding of the implications of changing economic systems for subsections of society defined by age, gender and class, and for developing societies in a globalising world.</p>
Assessment:	A 750 word class paper 20% (due mid-semester) a tutorial presentation and 500 word paper 20% (due during semester) and a 2500-word essay 60% (due at the end of semester). A hurdle requirement of participation in 8 of 10 tutorial (ie 80% of tutorials).
