<b>Subject Overview:</b>	<p>This subject introduces fundamental modelling techniques for the analysis of systems that involve electrical phenomena. Topics include:</p> <ul style="list-style-type: none"> <li># Electrical phenomena – charge, current, electrical potential, conservation of energy and charge, the generation, storage, transport and dissipation of electrical power, and the use of electrical phenomena for energy distribution, telecommunications and information processing;</li> <li># Network models – networks of “flow-drop” one-port elements, Kirchoff’s laws, standard current-voltage models for one-ports (independent sources, resistors, capacitors, inductors, transducers, diodes), analysis of static networks, properties of linear time-invariant (LTI) one-ports and impedance functions, transformers, steady-state (DC and AC) analysis of LTI networks via mesh and node techniques, equivalent circuits, and transient analysis of simple circuits;</li> <li># Digital systems – electrical encoding of information and the digital abstraction, analog-to-digital and digital-to-analog conversion, quantization and resolution, switching algebra, combinational logic networks, digital-data storage and simple sequential logic networks.</li> </ul> <p>This material will be complemented by exposure to software tools for the simulation of electrical and electronic systems and the opportunity to develop basic electrical engineering laboratory skills.</p>
<b>Objectives:</b>	<p>On completing this subject the student should be able to:</p> <ul style="list-style-type: none"> <li># Apply physical principles, fundamental abstractions and modelling techniques in the analysis of electrical and electronic systems;</li> <li># Construct and test simple electrical and electronic networks in the laboratory;</li> <li># Use software tools to simulate and synthesise simple electrical and electronic circuits.</li> </ul>
<b>Assessment:</b>	<p>One written examination, not exceeding three hours at the end of semester, worth 60% (must pass written exam to pass subject); Continuous assessment of project work, not exceeding 30 pages in total over the semester, worth 30%A one hour mid-semester test, worth 10%.</p>
