Subject Overview:	The Asia Pacific region is of crucial importance to Australia and to the future management of global forest resources. The region has over half the world's population and countries with the fastest growing populations and economies. This is placing increased demand on forest resources in the region and elsewhere. There extensive spiritual and cultural associations of people to forests in this region and an extensive history of forest use and development. Using case studies from countries such as India, China, Japan, Vietnam, Indonesia and Papua New Guinea, this subject deals with the main forest types in this region, the history of forest use, the current state of forests and forest management and the role of forests in the future development of this region. The subject will include a field trip to a country in the Asia Pacific region (resources permitting).
Objectives:	At the completion of this subject students will have an advanced understanding of: <ul style="list-style-type: none"> # The forest ecosystems of the Asia Pacific region and their role in human development # The management and governance systems for forest management in different parts of this region # Current issues and future trends in forest management, forest industries and utilisation
Assessment:	Reading and field studies journal (1500 words) 20%, Major assignment (4000 words) 60%, Oral presentation 20%
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
