Subject Overview:	Australia is one of the most urbanised countries in an increasingly urbanised world. This subject will introduce students to urban ecology and landscape ecology concepts and illustrate how they can be applied to plan and design more ecologically sustainable human landscapes. Topics include the concept of scale in ecology, land transformation and habitat fragmentation, the structure and components of landscapes, patterns and processes along urban-rural gradients, the impacts of urbanisation on biodiversity and strategies to mitigate them.												
Objectives:	<p>Upon completion of the course students should be able to</p> <ul style="list-style-type: none"> # Characterise the components of landscapes # Outline the causes and consequences of land transformation and habitat fragmentation 												

	<ul style="list-style-type: none"> # Understand the processes that operate in landscapes and how urbanisation may affect them # Discuss implications of ecological principles for planning and design of sustainable urban landscapes
Assessment:	Major Assignment. Written report suggesting and analysing measures to retrofit an urban area (visited on the field trip) for ecological sustainability (3000-5000 words, weeks 8-12) (30%) Practical reports (Weeks 3 and 6) (20%) Final Exam (2 hours, end of semester) (50%)
Prescribed Texts:	A reading pack will be prepared
