<b>Subject Overview:</b>	This subject aims to think critically and rigorously about the relationship between social and natural worlds. Its primary purpose is to question the idea that the environment exists outside of, and independent from, the realms of science, culture, politics and economy. Students will be introduced to different conceptual frameworks for understanding the environment as a social entity; to the processes by which capitalism and science structures social and environmental relations; and to alternative modes of living in, and thinking about, the environment. These broad themes will be addressed through engaging examples from Australia and beyond. Particular attention will be given to the concept of 'wilderness'; the postcolonial nature of the zoo; restoration ecology; ecotourism; the politics of visualising nature (eg. through wildlife documentary); the 'new natures' of genetic modification; and ideas about 'environmental justice'.
