Subject Overview:	This subject explores the strategies and instruments that public managers use to implement public policy. We will review several key aspects of the management role including: how public managers support the development and implantation of good public policy; how the management role fits within the framework of government and governance in different systems; how strategic management can be conceptualised and practiced in the public sector; and how questions of responsibility, accountability and performance are defined in the public sector as compared to private enterprise. We will examine the systemic and environmental imperatives which frame the manager's experience, including shifts from traditional notions of bureaucracy to contemporary approaches involving contracting, performance management, network governance and partnerships. Emphasis will be placed upon developing strong analytical and practical management skills, a detailed understanding of accountability issues, and an ability to strategize from a management perspective. The subject will require students to develop and present a case study of a public management challenge through research on a current case, together with an analytical treatment of options and dilemmas.
Objectives:	<ul style="list-style-type: none"> # have a thorough knowledge of contemporary theories and methods of public sector management. # have skills in evaluating current policy trends, programs and management practices. # be familiar with issues of privatisation and contracting out, the monitoring of contracts and broader accountability issues.
