

Science Informatics

Year and Campus:	2012																								
Coordinator:	Sean Maynard																								
Contact:	Email: sean.maynard@unimelb.edu.au (mailto:sean.maynard@unimelb.edu.au)																								
Overview:	A Science Informatics major will focus on preparing students for careers in information and data management, medical and health informatics and clinical research, physical informatics and social informatics. Graduates will be prepared for these pathways by developing skills in understanding, manipulating, visualising, integrating and exploiting data and information; these skills are crucial to many industries, particularly medical/health industries, and research in biological and physical sciences.																								
Objectives:	This major will integrate knowledge from a range of disciplines including computing, information modelling and human-computer interaction, by enabling students to complete a sequence of specialist subjects in each, as well as integrated subjects in which the students develop an understanding of the application of informatics to solving current problems in particular domains. Students will gain experience preparing them for the workplace by participating in project based subjects in which they will apply the skills they have learnt to real world problems.																								
Structure & Available Subjects:	Completion of 50 points of study at Level 3. N.B. The Science Informatics major has been updated for 2012. Students who completed Level 3 subjects towards this major prior to 2012 should also refer to the 2011 Handbook entry for this major

INFO30006 Information Management Techniques	Semester 2	12.50																							
Notes:	This major will not be offered after 2013. From 2014 it will be replaced by a new major, the Informatics major. Students commencing their Bachelor of Science in 2012 and beyond are advised to plan to take the Informatics major.
