

Objectives:	On completion of this subject associates will be able to: # Demonstrate enhanced competency in the skills necessary to raise student achievement, particularly for high-risk students and those with low achievement in literacy and numeracy; # Understand the processes of working towards change with others in the school community in challenging settings; # Use evidence to identify school-level need for change and potentially effective means of addressing school-level issues; and Identify areas for ongoing personal learning.
Assessment:	2500-word report on an issue within the Associate's school community. The first part of the report should use a range of existing evidence (student achievement data, student engagement data, qualitative data etc.) to identify one key challenge facing the school or a segment of the school population (for example, one year level or a particular sub-group of students). The second part of the report consists of a literature review on the key findings in the academic literature regarding this issue, identifying potential causes and potential means of addressing the issue. The literature review should critically evaluate the research, and point to potential interventions that may address the issue in their particular school context. Due Mid-semester (50%) 2500-word report on a school-level project that addresses the concern identified in the first assessment. The Associate will plan and implement an intervention that moves beyond their own classroom and involves a range of stakeholders. The report will outline the intervention, critically evaluate it in the light of the research literature and school-level evidence and provide school-level recommendations and systemic level recommendations (where relevant) for future directions. Due End of semester (50%)
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
