Subject Overview:	This subject builds on the knowledge and skills learnt in Mental Health Theory 1. It is designed to consolidate and extend problem-solving, critical thinking, rational inquiry and the integration of theoretical and practical aspects of specialty nursing for the beginning psychiatric nurse. The subject emphasizes the use of research evidence to underpin practice and provides the student with foundational knowledge about a range of bio/psycho/social psychiatric nursing interventions and practices, with a focus on caring for a range of mental health consumers across the lifespan in a range of mental health settings. The subject introduces students to a variety of therapies and skills such as relapse prevention, counselling, group facilitation, family sensitive practice, supportive psychotherapy, cognitive behavioural therapy, dialectical behavioural therapy, solution focused therapy, and narrative therapy. The subject emphasises recovery focused approaches to mental health care, where the consumer is at the centre of all aspects of treatment planning and implementation.						
Objectives:	Students will be expected to be able to demonstrate their beginning specialty nursing practice through: <ul style="list-style-type: none"> # integration of the theoretical content covered within the subject to develop new knowledge that supports safe practice as a beginning specialty nurse in mental health; 						

	<ul style="list-style-type: none"> # the ability to integrate knowledge and skills learnt in the subject to recognise and plan a response to patients experiencing alterations to health and wellness that occur in the specific context of mental health; # the ability to understand and evaluate specialised interventions as described in the subject content to provide a foundation for participating in the delivery of care at the beginning level of psychiatric nursing practice; # the capacity to use skills in problem-solving, critical thinking, rational inquiry and self-directed learning to apply knowledge learnt in the theoretical component of the subject to beginning level psychiatric nursing clinical practice; # an understanding of the changing knowledge base in the specialist area; # the ability to apply scientific knowledge to understand skills and techniques applicable to the specialist area
Assessment:	Written assignment of 3000 words (60%) - Due week 6 20 minute oral presentation (40%) - At the end of semester
