Subject Overview:	This subject focuses on the assessment, planning, implementation and evaluation of care for paediatric patients experiencing complex and/or multiple alterations to normal function. A case study approach is taken to facilitate exploration of diverse aspects of specialty practice in paediatrics. Essential concepts relating to topics such as trauma, multisystem disorders and organ transplantation are addressed. Students engage in problem solving activities applying concepts to specialty specific assessment and management of paediatric patients. Students are challenged to consider the psychosocial, ethical and legal implications of nursing practice in paediatric settings. In preparation for the role as specialty practitioners, students are encouraged to develop skills in teaching and health promotion for children and their families.
Objectives:	Students will be expected to be able to demonstrate their proficiency in specialty nursing practice through: <ul style="list-style-type: none"> • an understanding of the assessment, planning and management of paediatric patients with complex disorders requiring multi-system and multi-disciplinary interventions; • an ability to resource professional literature and apply research about patient management and specialty nursing practice; • participate in problem solving exercises to demonstrate the capacity to use skills in problem-solving, critical thinking, rational inquiry and self-directed learning to apply knowledge learnt in the theoretical component of the subject to proficient level paediatric nursing clinical practice and the capacity to enhance and value the knowledge of others;

	<ul style="list-style-type: none"> • an understanding of the impact of critical illness, medical interventions and technology upon the psychosocial and moral well-being of patients and their families; • an appreciation of the ethical and legal implications of paediatric nursing practice for the nurse: as an individual; as a member of a disciplinary team; as an employee of the healthcare institution and as a care provider for the paediatric patient and his/her family; • an advanced understanding of the changing knowledge base in the specialist area; an ability to evaluate and synthesise the research and professional literature in the discipline; • well-developed problem-solving abilities in the discipline area; a capacity to articulate their knowledge and understanding in written presentations; an appreciation of the design, conduct and reporting of original research; • an appreciation of the ways in which advanced knowledge equips the student to offer leadership in the specialist area.
Assessment:	1. 3 x 500 word Problem Based Learning activities. Due throughout semester with a cumulative semester grading. 35% 2. Written assignment of 3,000 words. Due end of semester. 65%
Prescribed Texts:	None
Recommended Texts:	A list of recommended texts will be supplied to students on enrolment in the subject.
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	On completion of the subject students should have developed the following generic skills of the Melbourne graduate and postgraduate coursework student: <ul style="list-style-type: none"> # a capacity to manage competing demands on time, including self-directed project work; # the capacity to value and participate in projects which require team-work.
