| Corequisites: | None | | | | | | | | | | | | | | | |
| Recommended Background Knowledge: | None | | | | | | | | | | | | | | | |
| Non Allowed Subjects: | None | | | | | | | | | | | | | | | |
| Core Participation Requirements: | It is University policy to take all reasonable steps to minimise the impact of disability upon academic study and reasonable steps will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact upon their active and safe participation in a subject are encouraged to discuss this with the relevant subject coordinator and the Disability Liaison Unit. | | | | | | | | | | | | | | | |
| Coordinator: | Dr Nicole Bell | | | | | | | | | | | | | | | |

| Subject Overview: | This subject provides an advanced introduction to condensed matter physics. The general topics covered are (i) experimental and theoretical aspects of the characterisation of condensed matter using electrons and x-rays and (ii) the quantum model of solids and its relevance to semiconductor and mesoscopic physics. Specific topics covered may include: (i) the imaging of condensed matter at the atomic level and (ii) the determination of how atoms are bonded; (iii) application of imaging beyond the nanoscale; (iv) magnetism; (v) superconductivity; (vi) the properties of semiconductor devices and (vii) mesoscopic systems. | | | | | | | | | | | | | | | |
| Objectives: | The objectives of this subject are: <ul style="list-style-type: none"> # To challenge the students to expand their knowledge of condensed matter physics and provide a foundation for further advanced studies. # To broaden their appreciation of how condensed matter physics integrates into the discipline of physics overall. # To develop a deep understanding of how condensed matter is characterised on the atomic scale. | | | | | | | | | | | | | | | |

| | |
|---|---|
| | # To understand the role of quantum effects in micro- and meso-scopic systems and acquire a fundamental understanding of a range of physical phenomena in condensed matter systems. |
| Assessment: | Two assignments totalling up to 36 pages of written work (20%), spaced equally during the semester. One four-hour end-of-semester written examination (80%). |
| Prescribed Texts: | None |
| Recommended Texts: | None |
| Breadth Options: | This subject is not available as a breadth subject. |
| Fees Information: | Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees |
| Generic Skills: | At the completion of this subject, students should have gained skills in: <ul style="list-style-type: none"> # analysing how to solve a problem by applying simple fundamental laws to more complicated situations; # applying abstract concepts to real-world situations; # solving relatively complicated problems using approximations; # participating as an effective member of a group in discussions and collaborative assignments; # managing time effectively in order to be prepared for group discussions and undertake the assignments and exam. |
