Further details on the disability support scheme can be found at the Disability Liaison Unit Website: http://www.services.unimelb.edu.au/disability/						
Coordinator:	Dr Jacqueline Anderson						
Contact:	Sarah Drew email: sarah@unimelb.edu.au						
Subject Overview:	A semester long, lecture-based subject focussed on (1) advanced issues in neuropsychological testing in professional settings; (2) principles of clinical interaction, including interviewing and history-taking; (3) diagnostic formulation; and (4) report writing. The administration and interpretation of current tests of mood and personality will be considered in detail.						
Objectives:	Students will gain a professional-level understanding of the clinical skills required for specialist neuropsychological practice. This will enable them to manage cases that are commonly encountered in placement settings. Students will acquire the ability to determine and utilize the clinical approach that is most appropriate for the clinical setting and the individual patient. They will gain an appreciation of the complexity of the patient-clinician relationship, and the important role of the neuropsychological professional in that relationship.						
Assessment:	A 2-hour written examination at the end of semester (70%) A mid-semester assignment, consisting of two written reports of 1,000 words each on two normal individuals in different age ranges, who have undergone a neuropsychological interview and assessment (30%).						
Prescribed Texts:	None.						
Recommended Texts:	None.						
Breadth Options:	This subject is not available as a breadth subject.						
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees						

Generic Skills:	Analysis and critical thinking, through evaluating the complex and varying information that needs to be amalgamated for a successful clinical interaction. Attention to detail, through observation of features that differentiate one individual from another, and appreciation of the significance of detailed observation for effective real world action. Written communication, through completion of assignments. Time management and planning, through organising and integrating multiple demands of the subject.
Related Course(s):	Master of Psychology (Clinical Neuropsychology) Master of Psychology (Clinical Neuropsychology)/Doctor of Philosophy
