<b>Subject Overview:</b>	<p>One of the primary themes driving environmental thinking in the first decade of the 21st century is the concept of sustainability. For planners, designers, property specialists and others involved in production of space the principal issue arising from the aim for sustainable cities, landscapes and regions, what is sustainable practice?</p> <p>This studio introduces the fundamental theories about the forms and processes that manifest sustainable environments (issues of urban form; species diversity; energy cycles and flows - materials selection and recycling; place theory)along with those that apply to decision making and implementation over the extended time frames.</p>						
<b>Objectives:</b>	Students will explore theories related to sustainable practice through their application to a design case. The case will be the vehicle for testing sustainability principles through a typical sequence of activities including environmental evaluation, site planning and design. Emphasis will be on advanced design and communication skills, and critical thinking						
<b>Assessment:</b>	Progressive project work equivalent to 10,000 words in total comprising an assignment equivalent to 3000 words due in week 5 (30%) and an assignment equivalent to 7000 words due at the end of semester (70%).
