

CHEN30005 Heat and Mass Transport Processes

Credit Points:	12.50															
Level:	3 (Undergraduate)															
Dates & Locations:	This subject is not offered in 2013.															
Time Commitment:	Contact Hours: 4 x one hour lectures + 1 x one hour tutorial per week + 1 x three hours of laboratory work per semester + 1 x one hour computer practical per semester Total Time Commitment: Estimated 120 hours															
Prerequisites:	<p>Students must have completed the following subjects prior to enrolling in this subject:</p> <table border="1"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>CHEN20008 Chemical Process Analysis 2</td> <td>Semester 2</td> <td>12.50</td> </tr> <tr> <td>CHEN20009 Transport Processes</td> <td>Not offered 2013</td> <td>12.50</td> </tr> </tbody> </table> <p>AND the following subject:</p> <table border="1"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>CHEM20018 Chemistry: Reactions and Synthesis</td> <td>Not offered 2013</td> <td>12.50</td> </tr> </tbody> </table> <p>CHEM20018 Reactions and Synthesis can be taken concurrently</p>	Subject	Study Period Commencement:	Credit Points:	CHEN20008 Chemical Process Analysis 2	Semester 2	12.50	CHEN20009 Transport Processes	Not offered 2013	12.50	Subject	Study Period Commencement:	Credit Points:	CHEM20018 Chemistry: Reactions and Synthesis	Not offered 2013	12.50
Subject	Study Period Commencement:	Credit Points:														
CHEN20008 Chemical Process Analysis 2	Semester 2	12.50														
CHEN20009 Transport Processes	Not offered 2013	12.50														
Subject	Study Period Commencement:	Credit Points:														
CHEM20018 Chemistry: Reactions and Synthesis	Not offered 2013	12.50														
Corequisites:	None															
Recommended Background Knowledge:	None															
Non Allowed Subjects:	None															
Core Participation Requirements:	For the purposes of considering applications for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005) and Students Experiencing Academic Disadvantage Policy, this subject requires all students to actively and safely participate in laboratory activities. Students who feel their disability may impact upon their participation are encouraged to discuss this with the Subject Co-ordinator and the Disability Liaison Unit http://www.services.unimelb.edu.au/disability/															
Contact:	Email: sandraek@unimelb.edu.au (mailto:sandraek@unimelb.edu.au)															
Subject Overview:	The fundamental concepts of heat transfer are extended from that covered in earlier subjects to include natural and forced convection and two phase systems. Mass transfer concepts are extended to unsteady state mass transfer and Fick's Second Law, prediction of diffusivity and of mass transfer coefficients. These fundamental concepts are then applied to the design of processes and equipment including shell and tube, air-cooled and plate heat exchangers, evaporator systems, membrane devices, binary distillation systems, gas absorbers and cooling towers. Use of appropriate simulation packages such as HYSYS and ASPEN will be included.															
Objectives:	<p>On completion of this subject students should be able to:</p> <ul style="list-style-type: none"> # Apply the principles of heat transfer to solve heat transfer problems, particularly those involving two phase systems # Assess quantitatively the performance of heat exchanger and evaporation equipment # Apply the principles of mass transfer to solve mass transfer problems and to membrane separation processes # Describe the concepts of equilibrium stage and continuous contactor analysis and apply these concepts to simple distillation and gas absorption problems 															

	<ul style="list-style-type: none"> # Assess quantitatively the performance of simple, conventional distillation, gas absorption and cooling tower equipment # Use simulation software for the basic design of heat exchangers and distillation columns
Assessment:	A written 3-hour end-of-semester examination (70%) A 90-minute written class test one third of the way through the semester (15%) Assignments involving laboratory work expected to take about 10 hours due during the semester (15%) A mark of greater than 40% in the end-of-semester examination is required to pass the subject
Prescribed Texts:	None
Recommended Texts:	J. F. Richardson, J. H. Harker with J. R. Backhurst, <i>Coulson & Richardson's Chemical Engineering Volumes 1 & 2</i> , 2002, Butterworth-Heinemann
Breadth Options:	<p>This subject potentially can be taken as a breadth subject component for the following courses:</p> <ul style="list-style-type: none"> # Bachelor of Arts (https://handbook.unimelb.edu.au/view/2013/B-ARTS) # Bachelor of Commerce (https://handbook.unimelb.edu.au/view/2013/B-COM) # Bachelor of Environments (https://handbook.unimelb.edu.au/view/2013/B-ENVS) # Bachelor of Music (https://handbook.unimelb.edu.au/view/2013/B-MUS) <p>You should visit learn more about breadth subjects (http://breadth.unimelb.edu.au/breadth/info/index.html) and read the breadth requirements for your degree, and should discuss your choice with your student adviser, before deciding on your subjects.</p>
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	<p>On completion of this subject students should be able to demonstrate an:</p> <ul style="list-style-type: none"> # Ability to apply knowledge of basic science and engineering fundamentals # In-depth technical competence in at least one engineering discipline # Ability to undertake problem identification, formulation and solution # Ability to use a systems approach to design and operational performance
