Subject Overview:	<p>Over the past two decades, the protection of intellectual property rights (IPRs) globally has become a major issue both for right holders and users, and one that has had profound implications in a number of important areas of public discourse, such as international trade, public health, education and research, national development and the promotion of biodiversity. This subject seeks to engage with all these issues, and begins with a discussion of the sources of international intellectual property (IP) law, including the principal IP treaties and the general architecture of the international IP system. It then considers a number of case studies where particular IP issues arise and where international solutions are presently being negotiated. It will also examine the growing tension between the territoriality of IPRs and the global scope of IP exploitation, considering how this clash plays out in the key areas of private international law. Both lecturers have had extensive experience in international intellectual property matters, and bring to the subject both academic and practical perspectives that add greatly to its interest and relevance.</p> <p>This subject will consist of a survey of the economic, legal and political elements and forces that shape the international IP system.</p> <p>Principal topics will include:</p> <ul style="list-style-type: none"> # Introduction to the international IP system, including the main producers and owners of IP, the institutional architecture and the treaty system
