

PHYC30011 Sub-atomic Physics

Credit Points:	12.50																					
Level:	3 (Undergraduate)																					
Dates & Locations:	This subject is not offered in 2013. Lectures																					
Time Commitment:	Contact Hours: 2 to 4 hours per week, 36 in total, lectures and problem-solving classes Total Time Commitment: Estimated total time commitment of 120 hours

Core Participation Requirements:	For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Students Experiencing Academic Disadvantage Policy, academic requirements for this subject are articulated in the Subject Description, Subject Objectives, Generic Skills and Assessment Requirements of this entry. The University is dedicated to provide support to those with special requirements. Further details on the disability support scheme can be found at the Disability Liaison Unit website: http://www.services.unimelb.edu.au/disability/

Subject Overview:	<p>The subject provides an introduction to the unified picture of elementary particles and atomic nuclei - how the elementary quarks combine to form strongly interacting particles, and how two of these, the proton and neutron combine to form atomic nuclei; how quarks and their composites interact with the leptons and with each other; how we study these systems experimentally; and the exciting unanswered questions in this field of physics.</p> <p>Topics covered will be selected from: quarks and leptons; strong, electromagnetic and weak interactions; symmetries and conservation laws; structure, models and properties of hadrons; structure, models and properties of nuclei; scattering and decay processes; accelerators; detectors; fission and fusion reactors; applications of nuclear and particle physics techniques; and other topics in sub-atomic physics of contemporary interest.</p>																					
Objectives:	Students completing this subject should be able to:																					

	<p># explain the unified picture of quarks and leptons, hadrons, and atomic nuclei, and their basic properties and interactions; and</p> <p># solve and analyse problems in these areas by applying simple quantum mechanical reasoning.</p> <p>In addition, students should enhance their ability to plan effective work schedules and manage their time to meet the deadlines for submission of assessable work and prepare for tests and examinations.</p>
Assessment:	Test of 1 hour (5%) and two assignments equivalent to 1500 words each during the semester (7.5% each); a 3-hour written examination in the examination period (80%).
