Subject Overview:	This subject aims to present major approaches to psychological disorders, in which psychopathology is contrasted with "normal" functioning. Reference is made to various theoretical approaches to the aetiologies of disorders/problems, with a focus on recognising the clinical pictures of common psychological disorders/problems that occur in a variety of settings, including, depression, the anxiety disorders, and substance abuse/dependence.
Objectives:	The subject aims to introduce students to various competing theories of aetiology and maintenance for psychological problems/disorders that commonly present to clinicians: <ul style="list-style-type: none"> # to provide students with an overview of the important criteria by which practising psychologists evaluate theoretical and treatment models; and # to develop familiarity with clinical presentations, co-morbidity, prevalence and incidence data, course and outcome, response to treatment for the psychological disorders.
Assessment:	A mid-semester one hour test (50% of assessment) and an end-of-semester one-hour test (50% of assessment).
