<b>Subject Overview:</b>	Software Systems must be carefully designed and analysed before they are constructed. This subject delivers the knowledge and skills needed for the analysis and design of medium to large-scale software systems. The subject also teaches students how off-the-shelf development																		

	frameworks can be utilized for designing large-scale software systems. The emphasis will be on analysis and techniques appropriate for object-oriented programming.
<b>Objectives:</b>	On completion of this subject students should be able to: <ul style="list-style-type: none"> <li># Analyse systems requirements</li> <li># Carry out an architectural and detailed design for medium-sized software systems</li> <li># Select appropriate design patterns for a design</li> <li># Choose an implementation platform and framework to suit a design</li> </ul>
<b>Assessment:</b>	Project work during semester, expected to take about 36 hours (40%) The project requires analysis, design, implementation and delivery, and will be performed in multiple stages, which involves several submissions during the semester. 2-hour end-of-semester written examination (60%). To pass the subject, students must obtain at least 50% overall 20/40 in project work And 30/60 in the mid-semester test and end-of-semester written examination combined ILO 1, 2 and 3 are addressed in the lectures, workshop exercises, project assignments and the end-of-semester examination. ILO 4 is addressed in the workshop exercises and project assignment.
