<b>Core Participation Requirements:</b>	For the purposes of considering applications for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005) and Students Experiencing Academic Disadvantage Policy, this subject requires all students to actively and safely participate in laboratory activities. Students who feel their disability may impact upon their participation are encouraged to discuss this with the Subject Coordinator and the Disability Liaison Unit. <b>Subject Overview:</b>	This level 3 chemistry subject is for students who commenced studies in chemistry prior to 2008 and intend to complete a Chemistry major. This subject investigates aspects of physical chemistry. The subject includes lectures and tutorials only.												

<b>Learning Outcomes:</b>	Upon completion of this subject, students should have an understanding of quantum theory (wave equations, tunnelling processes, vibrational and rotational motions, and quantum effects in extended systems), statistical mechanics (Boltzmann distributions and partition functions), molecular interactions (electric dipole moments and dipole interactions, electrostatic and dispersion forces, H-bonding, hydrophobic, repulsive and attractive interactions, interactions and the liquid-vapour interface) and kinetics (collision theory, elementary reactions, steady-state approximation, reaction rates, kinetic motion in gases, molecular motion in liquids, diffusion, catalysis, enzyme kinetics, chain reactions). They should have an understanding of colloidal phenomena and how they are dictated by surface interactions and be able to quantitatively characterise excited state properties and understand their significance in processes such as photosynthesis and photo-degradation of materials.
<b>Assessment:</b>	To address the diversity of material taught in the various modules of this subject, there will be several options for assessment. The assessment for the specific module will be announced in the first lecture. Option 1: One one-hour end of semester exam (80%) and one to two assignments conducted during the module (20%). Option 2: Several assignments (written and/or oral) conducted during the module (100%).
<b>Prescribed Texts:</b>	P Atkins and J De Paula, Atkins' Physical Chemistry, 8th Ed, Oxford University Press, 2006.
