

ENEN90032 Environmental Analysis Tools

Credit Points:	12.50											
Level:	9 (Graduate/Postgraduate)											
Dates & Locations:	This subject is not offered in 2014.											
Time Commitment:	Contact Hours: 48 hours, comprising of two hours of lectures and two hours of tutorials per week. Total Time Commitment: 200 hours											
Prerequisites:	Admission to MC-ENG Master of Engineering OR Admission to the 206EC/BU Master of Environmental Engineering OR <table border="1" data-bbox="387 517 1485 696"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>MAST20029 Engineering Mathematics</td> <td>Summer Term, Semester 1, Semester 2</td> <td>12.50</td> </tr> </tbody> </table>			Subject	Study Period Commencement:	Credit Points:	MAST20029 Engineering Mathematics	Summer Term, Semester 1, Semester 2	12.50			
Subject	Study Period Commencement:	Credit Points:										
MAST20029 Engineering Mathematics	Summer Term, Semester 1, Semester 2	12.50										
Corequisites:	None											
Recommended Background Knowledge:	Completion of the following subjects will assist in learning: <table border="1" data-bbox="387 860 1485 1061"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>CVEN30008 Risk Analysis</td> <td>Semester 1</td> <td>12.50</td> </tr> <tr> <td>CVEN30010 Systems Modelling and Design</td> <td>Semester 2</td> <td>12.50</td> </tr> </tbody> </table>			Subject	Study Period Commencement:	Credit Points:	CVEN30008 Risk Analysis	Semester 1	12.50	CVEN30010 Systems Modelling and Design	Semester 2	12.50
Subject	Study Period Commencement:	Credit Points:										
CVEN30008 Risk Analysis	Semester 1	12.50										
CVEN30010 Systems Modelling and Design	Semester 2	12.50										
Non Allowed Subjects:	None											
Core Participation Requirements:	<p>For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Student Support and Engagement Policy, academic requirements for this subject are articulated in the Subject Overview, Learning Outcomes, Assessment and Generic Skills sections of this entry.</p> <p>It is University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and Student Equity and Disability Support: http://services.unimelb.edu.au/disability</p>											
Contact:	Dr Dongryeol Ryu dryu@unimelb.edu.au (mailto:dryu@unimelb.edu.au)											
Subject Overview:	<p>AIMS</p> <p>The aim of this subject is to help students develop capability to effectively summarise environmental variables met in the course of research and design, to select appropriate statistical models describing the data structure, and to conduct statistical inference on underlying processes. Students will apply a variety of models from a conventional or Bayesian approach to solve the problems at hand and derive deterministic or stochastic inferences from them.</p> <p>The subject is composed of four wide-ranging topics from exploratory data analysis to spatial modelling. At the beginning of each topic, students are provided with a set of data from environmental research, and a number of analysis tools are conveyed in the lectures. The mathematical aspects of the subject build on concepts developed in fundamental engineering mathematics and statistics courses from undergraduate courses. It supports student learning in the capstone design and research projects where data analysis skills are assumed.</p>											

	<p>The subject provides a fundamental skill for a career in environmental engineering where the ability to analyse and communicate the meaning of time series and spatial data sets are expected.</p> <p>INDICATIVE CONTENT Specific topics include:</p> <ol style="list-style-type: none"> 1. Exploratory Data Analysis <ul style="list-style-type: none"> # Summary statistics and probability models # Analysis of variability and hypothesis test # Linear regression and verification/validation 2. Time Series Analysis <ul style="list-style-type: none"> # Introduction to multivariate analysis # Principle component analysis # Stochastic forecast and verification 3. Methods for Multivariate Data <ul style="list-style-type: none"> # Principle component analysis # Factor analysis 4. Analysis of Spatial Data <ul style="list-style-type: none"> # Simple spatial interpolations # Analysis of spatial variability # Spatial models and Kriging
Learning Outcomes:	<p>INTENDED LEARNING OUTCOMES (ILO) Having completed this subject the student is expected to:</p> <ol style="list-style-type: none"> 1 Effectively summarise their analysis and design outputs 2 Use stochastic approach to make statistical inference about random environmental variables 3 Define and evaluate objective functions for their design target 4 Quantitatively test their hypothesis 5 Select the most appropriate statistical model describing the data at hand 6 Generate both deterministic and stochastic realisations of environmental variables
Assessment:	Two 2500-word reports, due mid-semester and week 12 (90%). Addresses Intended Learning Outcomes (ILOs) 1 - 6. Four 20-minute quizzes held every three weeks throughout the semester (10%). Addresses ILOs 1 – 6.
Prescribed Texts:	None
Recommended Texts:	<p>Chris Chatfield (2004) The Analysis of Time Series: An Introduction. Chapman & Hall. Boca Raton, FL</p> <p>Wilks D.S., (2011) Statistical Methods in the Atmospheric Sciences. Elsevier, Amsterdam, The Netherlands.</p> <p>Kitanidis P.K. (1997) Introduction to Geostatistics: Applications to Hydrogeology. Cambridge University Press, Cambridge; New York</p> <p>Ramsey, Fred L. & Daniel W. Schafer. (2013) The Statistical Sleuth: A Course in Methods of Data Analysis. Brooks/Cole Cengage Learning, Boston, MA</p>
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	<ul style="list-style-type: none"> # Ability to apply knowledge of science and engineering fundamentals # Ability to undertake problem identification, formulation, and solution # Proficiency in engineering design # Ability to conduct an engineering project

<p>Notes:</p>	<p>LEARNING AND TEACHING METHODS Key analysis methods are introduced in lectures, which are then followed up in tutorial and computer based exercises. The tutorial use problem based learning techniques. The computer based exercises use MatLab as the main software tool, which is used throughout the course.</p> <p>INDICATIVE KEY LEARNING RESOURCES Chris Chatfield (2004) The Analysis of Time Series: An Introduction.
