Overview:	<p>On completion of this course students should have achieved:</p> <ul style="list-style-type: none"> # a broad knowledge in the field of genetics; # a capacity to use experimentation in genetics to understand aspects of biology; and # a capacity to integrate various theoretical and experimental approaches to problems in genetics. 																								
Learning Outcomes:	<p>Areas of specialisation</p> <p>The coursework and research components of this Graduate Diploma in Science (Advanced) enable students to further their knowledge in the following areas: classical genetics; the history of genetics; population and evolutionary genetics; ecological genetics; molecular genetics; and developmental genetics. Typical research projects study aspects of heavy metal detoxification mechanisms in plants and animals; copper metabolism in mammals and the role of copper in neurodegenerative diseases; gene regulation in fungi; the ecological, evolutionary and molecular genetics of insecticide resistance; evolutionary genetics; and developmental genetics.</p>																								
Structure & Available Subjects:	<ul style="list-style-type: none"> # Discipline Core subjects (12.5 points); # Elective subjects (37.5 points); # Research Project (50 points).

Depending on the coursework subjects taken a student would normally enrol in a combination of Research Project subjects as indicated below to ensure they have completed 50 points by the end of the course.

Subject	Study Period Commencement:	Credit Points:
GENE90013 Advanced Genetic Research	Semester 1, Semester 2	12.50
GENE90015 Advanced Genetic Research	Semester 1, Semester 2	25
GENE90016 Advanced Genetic Research	Semester 1, Semester 2	37.50
