Subject Overview:	This subject focuses on algorithmic digital form explorations using intensive computational scripting coupled with fabrication of detailed material models. The selected topics introduced in the subject include: variational design, interactive skins and spaces, materials and technologies of digital fabrication.
Learning Outcomes:	On completion of the subject students should have developed: <ul style="list-style-type: none"> # knowledge of the impact of digital technology on theoretical issues in spatial design; # critical awareness of the relationship between representation and spatial design with an emphasis on digital design environments; # skills in the use of computational design and digital technologies.
Assessment:	Attendance and class participation throughout the semester (10%) Readings - participation in 'seminar sessions' throughout the semester (15%) Design Task: A3 folio of 'process' work, due at the end of the exam period (15%) Explanatory text (approx. one side of A4), due at the end

	of the exam period (10%) Physical Model(s) and A1 poster of design due at the end of the exam period (50%)* *Physical Model(s) - At least one model that shows a significant section of your design @ 1:20. A1 poster needs to communicate the key ideas behind your proposal, can be a combination of typical architectural drawings/diagrams/renders.
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	<ul style="list-style-type: none"> # Critical thinking and analysis. # Information gathering and critical synthesis. # Comprehension of complex concepts and the ability to express them lucidly in writing. # Methods of documentation and presentation.
