Subject Overview:	This subject provides an advanced course in theory and applied research on the economics of the household sector of the economy. Topics include: new theories of household economics, household demography, the diffusion of new household technology, the input-output structure of household production and leisure activities, national accounts of household production, and household time use and expenditure data.						
Learning Outcomes:	On successful completion of this subject students should be able to: <ul style="list-style-type: none"> # Explain the role of households as producers; # Describe the structure, organisation and management of household production; # Explain the construction of satellite accounts of household production and the estimation of Gross Household Product (GHP); # Demonstrate the macroeconomic size of the household economy in countries at different stages of development; # Evaluate the theoretical basis of the "new" household economics and the factors influencing the choices between paid work, unpaid work and leisure; # Explain the roles of technology and demography in determining changes in household productive activities; # Apply household expenditure and time use data to model various explanations of household production and consumption. 						
Assessment:	An empirical assignment totalling no more than 3000 words (40%) Final research essay of no more than 5000 words (60%)						
Prescribed Texts:	You will be advised of prescribed texts by your lecturer.						

Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
