Subject Overview:	This subject examines concepts, theories and issues in educational and developmental psychology necessary to understand and diagnose academic learning disabilities that will lead to effective curriculum development. It will examine the individual differences in cognitive structures such as the representation of knowledge by learners, short-term and long-term memory, cognitive and metacognitive processes, and the affective processes associated with understanding learning, such as self-efficacy and motivation to learn.
Learning Outcomes:	On completion of this subject, students should be able to: <ul style="list-style-type: none"> # Understand the developmental processes that underpin a student's abilities to successfully engage in literacy and numeracy learning # Describe the role of long- and short- term memory, meta-cognitive processes and affective processes in learning # Investigate how curriculum can be developed to assist students to develop and cope with their particular learning difficulty.
Assessment:	Reflective task (500 words) due mid-semester, 10% Written task (4500 words) due end semester, 90% Attendance at all classes (tutorial/seminars/practical classes/lectures/labs/online classes) is obligatory. Failure to attend 80% of classes will normally result in failure in the subject.
Prescribed Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
