<b>Subject Overview:</b>	This subject examines the role of marketing in the wider society, beyond its relationship with consumers and shareholders. It looks at the benefits marketing provides, but it also looks at criticisms of marketing in terms of its negative influence on individual consumers and society as a whole. Some of these criticisms include deliberate behaviours, such as deceptive advertising and high-pressure sales techniques, while others are more systemic, such as the promotion of materialism and the destruction of the natural environment. Many of these criticisms constitute public issues (eg. consumerism, climate change), where individuals and consumer groups express their concerns through organised boycotts and political protest. This subject considers how marketers should respond to these criticisms and examines the government's role in regulating the marketing and society relationship.
