Subject Overview:	This subject examines Greek theories of knowledge, reality and value, concentrating on Plato, Aristotle, and several major Hellenistic philosophers, with some coverage of other ancient thinkers as well. Specific questions to be discussed will include: How is knowing possible? What roles in knowledge are played by perception, and by the intellect? What is the reality we seek to know? Is it possible to be responsible for what we do? What is the nature of the soul and mind? How are values - religious, ethical, aesthetic and epistemic values - to be understood, and how do they 'fit in' to reality? Differences in the approaches to these questions to be found in various ancient thinkers will be explored. Greek philosophy is fascinating in its own right. But it also launches the whole discipline of philosophy. The subject will also involve some discussion of how Greek approaches to the questions mentioned both prefigure, but also diverge from, the ways these questions were taken up in the subsequent trajectory of western philosophy.
