

PHYC90013 Condensed Matter Physics

Credit Points:	12.5															
Level:	9 (Graduate/Postgraduate)															
Dates & Locations:	2015, Parkville This subject commences in the following study period/s: Semester 2, Parkville - Taught on campus.															
Time Commitment:	Contact Hours: 36 hours comprising 3 one-hour lectures/week. Total Time Commitment: 170 hours															
Prerequisites:	<table border="1"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>PHYC90007 Quantum Mechanics</td> <td>Semester 1</td> <td>12.50</td> </tr> <tr> <td>PHYC90008 Quantum Field Theory</td> <td>Semester 1</td> <td>12.50</td> </tr> </tbody> </table> <p>and a third-year subject in statistical physics equivalent to</p> <table border="1"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>PHYC30017 Statistical Physics</td> <td>Semester 2</td> <td>12.50</td> </tr> </tbody> </table>	Subject	Study Period Commencement:	Credit Points:	PHYC90007 Quantum Mechanics	Semester 1	12.50	PHYC90008 Quantum Field Theory	Semester 1	12.50	Subject	Study Period Commencement:	Credit Points:	PHYC30017 Statistical Physics	Semester 2	12.50
Subject	Study Period Commencement:	Credit Points:														
PHYC90007 Quantum Mechanics	Semester 1	12.50														
PHYC90008 Quantum Field Theory	Semester 1	12.50														
Subject	Study Period Commencement:	Credit Points:														
PHYC30017 Statistical Physics	Semester 2	12.50														
Corequisites:	None															
Recommended Background Knowledge:	None															
Non Allowed Subjects:	None															
Core Participation Requirements:	It is University policy to take all reasonable steps to minimise the impact of disability upon academic study and reasonable steps will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact upon their active and safe participation in a subject are encouraged to discuss this with the relevant subject coordinator and the Disability Liaison Unit.															
Coordinator:	Assoc Prof Jeffrey McCallum															
Contact:	Email: msc@physics.unimelb.edu.au (mailto:msc@physics.unimelb.edu.au)															
Subject Overview:	This subject provides an advanced introduction to condensed matter physics. The general topics covered are (i) experimental and theoretical aspects of the characterisation of condensed matter using electrons and x-rays and (ii) the quantum model of solids and its relevance to semiconductor and mesoscopic physics. Specific topics covered may include: (i) the imaging of condensed matter at the atomic level and (ii) the determination of how atoms are bonded; (iii) application of imaging beyond the nanoscale; (iv) magnetism; (v) superconductivity; (vi) the properties of semiconductor devices and (vii) mesoscopic systems.															
Learning Outcomes:	The objectives of this subject are: <ul style="list-style-type: none"> # To challenge the students to expand their knowledge of condensed matter physics and provide a foundation for further advanced studies. # To broaden their appreciation of how condensed matter physics integrates into the discipline of physics overall. # To develop a deep understanding of how condensed matter is characterised on the atomic scale. 															

	# To understand the role of quantum effects in micro- and meso-scopic systems and acquire a fundamental understanding of a range of physical phenomena in condensed matter systems.
Assessment:	Two assignments totalling up to 36 pages of written work (20%), spaced equally during the semester. One four-hour end-of-semester written examination (80%).
Prescribed Texts:	None
Recommended Texts:	None
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	At the completion of this subject, students should have gained skills in: <ul style="list-style-type: none"> # analysing how to solve a problem by applying simple fundamental laws to more complicated situations; # applying abstract concepts to real-world situations; # solving relatively complicated problems using approximations; # participating as an effective member of a group in discussions and collaborative assignments; # managing time effectively in order to be prepared for group discussions and undertake the assignments and exam.
Related Course(s):	Master of Science (Physics)
Related Majors/Minors/Specialisations:	Physics Physics
