

PHYS90008 Advanced Seminars in Physiology

Credit Points:	12.5						
Level:	9 (Graduate/Postgraduate)						
Dates & Locations:	2015, Parkville This subject commences in the following study period/s: Semester 1, Parkville - Taught on campus.						
Time Commitment:	Contact Hours: 30 Total Time Commitment: An estimated total time commitment of 170 hours (including non-contact time)						
Prerequisites:	Students must be enrolled in the Bachelor of Biomedicine (Honours), Bachelor of Science (Honours) or Master of Science to complete this subject. <table border="1" data-bbox="389 600 1485 748"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>BIOM40001 Introduction To Biomedical Research</td> <td>February</td> <td>12.50</td> </tr> </tbody> </table>	Subject	Study Period Commencement:	Credit Points:	BIOM40001 Introduction To Biomedical Research	February	12.50
Subject	Study Period Commencement:	Credit Points:					
BIOM40001 Introduction To Biomedical Research	February	12.50					
Corequisites:	<table border="1" data-bbox="389 775 1485 922"> <thead> <tr> <th>Subject</th> <th>Study Period Commencement:</th> <th>Credit Points:</th> </tr> </thead> <tbody> <tr> <td>PHYS40005 Physiology Research Project</td> <td>Semester 1</td> <td>25</td> </tr> </tbody> </table>	Subject	Study Period Commencement:	Credit Points:	PHYS40005 Physiology Research Project	Semester 1	25
Subject	Study Period Commencement:	Credit Points:					
PHYS40005 Physiology Research Project	Semester 1	25					
Recommended Background Knowledge:	Undergraduate 3 year sequence in relevant experimental science discipline.						
Non Allowed Subjects:	None						
Core Participation Requirements:	For the purposes of considering request for Reasonable Adjustments under the Disability Standards for Education (Cwth 2005), and Student Equitable Adjustment Procedure (SEAP), academic requirements for this subject are articulated in the Subject Overview, Learning Outcomes, Assessment and Generic Skills sections of this entry. It is University policy to take all reasonable steps to minimise the impact of disability upon academic study, and reasonable adjustments will be made to enhance a student's participation in the University's programs. Students who feel their disability may impact on meeting the requirements of this subject are encouraged to discuss this matter with a Faculty Student Adviser and the Disability Liaison Unit: http://www.services.unimelb.edu.au/disability/						
Coordinator:	Dr Rene Koopman						
Contact:	Subject Coordinator: Dr Rene Koopman rkoopman@unimelb.edu.au (mailto:rkoopman@unimelb.edu.au) Administrative Coordinator: Ms Lesley Robinson lesleyr@unimelb.edu.au (mailto:lesleyr@unimelb.edu.au)						
Subject Overview:	This subject uses Research Seminars as a vehicle to teach students the experimental approach to contemporary physiological questions. The seminars will be presented by a mixture of Physiology Department faculty, invited speakers from outside the department, and postgraduate students. The seminars will be chosen to cover each of the three main research areas of the department; Cardiovascular Physiology, Neurophysiology, and Muscle and Exercise Physiology. Students will engage with a diverse range of physiological questions and the experimental strategies used to address them. Students will learn to critique seminars and to focus on the scientific essentials, i.e. what question is being addressed? What led up to this question? What strategies are being used to answer the question, and how well have they succeeded? Three						

	seminars will receive particular attention. Questions and recommended reading, set by the speaker, will be distributed several days in advance, to assist the student to start thinking along helpful lines before each of these three seminars. After attending each of these seminars, students will participate in workshops in which directed questions and structured discussion will be used to engage students further with the scientific issues arising from the seminars.
Learning Outcomes:	To develop student awareness and knowledge of how contemporary physiological questions are addressed in a broad range of sub-disciplines; To cultivate an appreciation and understanding of the major sub-disciplines of physiological research; To increase students' knowledge of the experimental approaches and strategies used in different areas of physiology, and to think of ways that these could be applied to their own research projects; To teach students to think critically about the limitations and weaknesses that are associated with virtually all experimental strategies; To encourage students to conceptualize their own experimental strategies and approaches to physiological questions.
Assessment:	75% of assessment is from written assignments (three 1500-2000 word assignments submitted during semester, each worth 25%). 15% of the assessment is from workshop presentations. 10% of assessment is attendance at the weekly seminars.
Prescribed Texts:	No specific text. Recommended reading will be given with the pre-seminar questions for the three seminars used for assignments.
Breadth Options:	This subject is not available as a breadth subject.
Fees Information:	Subject EFTSL, Level, Discipline & Census Date, http://enrolment.unimelb.edu.au/fees
Generic Skills:	Analysing complex scientific issues. Identifying critical and essential factors from a large body of information Making a constructive critique of a scientific presentation Performing written and oral communication skills at a high standard. Contributing to intellectual discussion Generating new ideas for scientific experiments
