<b>Subject Overview:</b>	Democracy is popularly regarded as the fairest system of government. Yet it is a widely and deeply contested concept in political theory. In practice it can vary from the highly participatory to the narrowly elitist. This subject examines the key concepts in democratic theory and the ways in which they are employed in different political ideologies and movements. It identifies the main principles in which are invoked to support the political structures of different societies. In so doing the subject analyses concepts such as freedom, equality and rights and their implications for the nature of democracy and the organization of the state and civil society. It will also explain the different forms of political agency that exist in democracies from the nation to the community and the individual. In recent years the ideals of democracy have been challenged through the emergence of terrorism, the growth of violence perpetrated by democracies, and attendant issues such as the displacement of people, migration and policies on refugees. This subject examines the status of democracy in the world today and the implications of contemporary challenges for the future of democracy.
