<b>Subject Overview:</b>	This subject expands on the themes developed in VETS30011 Animal Disease Biotechnology 1 and the role of animal health surveillance in maintaining the health of human populations. The subject may include industry placements, with opportunities to develop laboratory skills in areas such as haematology, biochemistry, serology, microbiology, molecular biology, anatomic pathology and toxicology.						
<b>Learning Outcomes:</b>	This subject aims to prepare students for careers in animal health and disease surveillance. Its objectives are to equip students with an understanding of techniques used to assess the health of individual animals and populations of animals, as well as an understanding of the biological basis of these tests. Students satisfactorily completing this subject will also acquire skills in performing a range of laboratory tests used in monitoring the health of populations of animals.						
<b>Assessment:</b>	A 2-hour end-of-semester written examination (75%) Assessment of laboratory based exercises (tests and report writing) (25%)
